# Design, synthesis and biological screening of some diaryl acetamide derivatives as potential cytotoxic agents on HL-60(TB) cell line

Bioorganic Chemistry • Article • 2025 •
DOI: 10.1016/j.bioorg.2025.108999

Abdelhameid, Mohammed K.[a] ; Hara, Mohammed A.[b]; Ramadan, Mohamed; Taher, Ehab S.[b,c]; A.Ramadan, Mostafa[d];

## Abstract

In this study, novel diaryl acetamide derivatives were designed and evaluated as potential cytotoxic agents against the leukemic cells HL-60

(TB) with tyrosine kinase FMS-3(FLT-3) enzyme inhibitory activity. The designed molecules were synthesized and investigated for the FLT3 enzyme inhibition. Compounds 5a, 15b, and 16b showed significant inhibitory activity against the FLT-3 enzyme. Assessment of cytotoxicity on HL-60 cells revealed that compound 15b exhibited superior activity than Quizartinib (AC220). Additionally, compounds 5a and 15b effectively arrested the cell cycle at the $G_1$ phase upon testing on HL-60 cells, suggesting potential abilities in blocking HL-60 cells' proliferation. The annexin-V stain assay demonstrated that compounds 5a, 15b, and 16b induced apoptosis in HL-60 cells. Furthermore, the ELISA assay showed that the blocking of cell cycle proliferation of HL-60 cells was mediated via the induction of cell cycle regulatory proteins p53 and p21. Meanwhile, the observed apoptosis induction was mediated by increasing apoptotic mediators, Bax/Bcl-2 ratio, and up-regulating caspase-3. Molecular docking studies revealed the binding affinities and interactions of the newly synthesized compounds, along with the reference compound Quizartinib, with the FLT-3 enzyme binding site. © 2025 Elsevier Inc.

## Funding details

Details about financial support for research, including funding sources and grant numbers as provided in academic publications.

Faculté de pharmacie, Université de Montréal

See opportunities ↗

### Funding text 1

The authors would like to acknowledge IRG, Faculty of pharmacy, Cairo University for financial support of biological screening. Also, the authors would like to express their sincere thanks to all members of BPS Bioscience Corporation, San Diego, CA, USA for enzyme inhibition assay and the department of NCI, for carrying out the cytotoxicity testing (IC50). The authors are grateful to Dr. Manal R. Mohammed, Department of Radiation Biology, and National Center for Radiation Research and Technology, Cairo, Egypt for measurement of cell cycle and apoptosis regulator markers.

### Funding text 2

This research was supported by Cairo University, Faculty of Pharmacy, under Grant No. 00978001.
